Competent Authority
Cyprus Securities and Exchange Commission (CySEC)

Document date
October 2022

What is this Product? - Product type

The derivative instrument being a contract for difference (CFD). It allows you to have an indirect exposure to an underlying product/financial instrument (futures such as energies – oil and natural gas). You will not own the underlying product/financial instrument, but you can make gains or suffer losses as a result of price or value movements in relation to the underlying product or financial instrument to which you have the indirect exposure.

Objectives
The purpose of the product is to give the possibility of active investing in the underlying instrument over short term period without owning it. The rate of return on investment in a product depends on the purchase price and the selling price of the offered product and the size of the position, as well as the costs associated with the product. The product reflects changes in the prices of the underlying instrument on which it is based. Both loss and profit when opening a position on the product are unlimited, however the Company offers Negative Balance Protection ensuring that you will not lose more than you invested. When opening a position on a product, you are required to make a deposit, which is the percentage of the total value of the contract in your account called the initial margin required. You need to be aware that trading on margin may magnify your potential losses or gains. For example, you believe that there would be a significant volatility on Crude Oil future, so you may decide to purchase a CFD (long position) on this future product, with the intention to sell it with the price higher than the initial level. The difference between the price at which you buy and sell equals your profit minus any relevant costs if applicable. The same works in other direction, if you believe that the price of Crude Oil future will drop you may sell the CFD (short position) with the intention to buy it later at the lower price, and the same as above the difference between the price at which you buy and sell equals your profit minus any relevant costs if applicable.

Intended retail investor
The product is not intended for every investor. The product is intended for retail and professional investors who understand the principles of derivative instruments and the risks associated with them, actively invests in such instruments and at the same time are aware of investment risks. The investor should become familiar with the applicable regulations, take part in available trainings and become acquainted with the demo version of the trading platform in order to obtain the sufficient knowledge and experience to be able to manage risks of leveraged trading. When trading this instrument, you are responsible for opening and closing your position as well as choosing the size of your position and any risk management tools offered, such as stop loss or take profit.

Term
CFDs generally do not have a specific maturity date or minimum holding period or pre-set conditions and will only expire if you choose to close the trade or in case you do not have a margin available to sustain your opened positions.

Risks associated and possible benefits

Risk level
RISK INDICATOR

1	2	3	4	5	6	7

LOWER RISK ⟷ HIGHER RISK

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from a future performance at a very high level.

Be aware of currency risk. An investor may lose all invested capital, understood as a deposit protecting the open position on the product. Therefore, you should ensure that your account possesses the necessary margin to avoid any stop outs. Before, deciding to trade on margin products you should take into consideration your investment objectives, risk tolerance and level of the experience you have obtained on these products. These products may not be appropriate for everyone; therefore, you should ensure that you understand the risks involved and seek independent advice if required. There are several types of trading risk, including leverage risk, which you should be aware of before beginning to trade. Factors that affect the performance of this product include but are not limited to:

- Leverage risk
- Risk of unlimited loss
- Margin risk
- Foreign exchange risk
- Market risk
- Unregulated market risk
- Market disruption risk
- Counterparty risk
- Online trading platform and IT risk
- Conflicts of interest
- Rollover risk

Performance scenario

*Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.
This key information document is not specific to a particular product, but to the category of products CFD on Future Energy. The table below represents outcomes of profits and losses under various circumstances. In this scenario, we assume you buy a CFD contract on Crude Oil future with a volume of 1 lot (1000 barrels) at a price of $58.00. This means that your notional exposure to the contract is $58,000 (1000 contracts x the price $58.00). However, keep in mind that you do not need to invest $58,000, assuming that the initial margin is 1:10 you will only have to deposit $5,800 which is 10% of the notional exposure of $58,000. The same pattern applies in the scenario when you wish to sell a CFD contract on Crude Oil future with the same volume, price and leverage.

Long Performance Scenario (1 year)	Opening Price	Closing Price	Price Change	Profit/Loss	Return in % on Invested Capital of $5,800
Favourable	$58.00	$58.58	+1.00%	+$580	+10.00%
Moderate	$58.00	$58.29	+0.50%	+$290	+5.00%
Unfavourable	$58.00	$57.71	-0.50%	-$290	-5.00%
Stress	$58.00	$55.68	-4.00%	-$2,320	-40.00%
Short Performance Scenario	Opening Price	Closing Price	Price Change	Profit/Loss	Return in % on Invested Capital of $5,800
Favourable	$58.00	$57.42	-1.00%	+580	+10.00%
Moderate	$58.00	$57.71	-0.50%	+$290	+5.00%
Unfavourable	$58.00	$58.29	+0.50%	-$290	-5.00%
Stress	$58.00	$60.32	+4.00%	-$2,320	-40.00%

The scenario above represents potential performance of your investment. Please bear in mind that a volatile price movement can rapidly lead either to profit or loss on your investment, and a small percentage of the price change could result in significant changes in your potential returns or losses due to the effect of the leverage.

Costs over time

The table below shows the amounts that are deducted from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product [and how well the product is doing (where applicable)]. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.
*We have assumed holding periods of 1, 3 and 5 years and an investment of $ 50 000 and used Crude Oil future as an example. Client opens a long position of 1 lot (1 000 barrels/contracts) on Crude Oil future at a price 93.14 paying commission of $1.86 (0.002%). Future contracts can expire on a month, quarterly or yearly basis. If the client chooses to proceed with the rollover he will get charged the spread at the time of the rollover. The required margin amounts for 10% ($ 9 314).

Cost Type	Ask	Bid	Margin	Total Cost	Percentage of margin
Spread (93.14-93.07)* 1000	93.14	93.07	$ 9,314	$ 70.00	0.75% of margin
Commission for opening (93,140 * 0.00002)				$ 1.86	0.02% of margin
Commission for closing (93,070 * 0.00002)				$ 1.86	0.02% of margin
Rollover cost (12*70)	1 per month	1 year		$ (840)	9.02% of margin
Rollover cost (36*70)	1 per month	3 years		$ (2,520)	27.05%of margin
Rollover cost (60*70)	1 per month	5 years		$ (4,200)	45.09% of margin

	If you exit after 1 year	If you exit after 3 years	If you exit after 5 years
Total costs paid	$ (913.72)	$ (2,593.72)	$ (4,273.72)
Annual cost impact	-1.82%	-5.18%	-8.54%

What happens if Conotoxia is unable to pay out?

Conotoxia Ltd is a member of the Investor Compensation Fund within the definition of Directive DI87-07 of the Cyprus Securities and Exchange Commission for the continuance of operation and the operation of the CIF Investor Compensation Fund.
The amount of compensation payable to each covered client is calculated in accordance with the legal and contractual terms governing the relation of the covered client with the Company, subject to the setoff rules applied for the calculation of the claims between the covered client and the Company. The calculation of the payable compensation derives from the sum of total established claims of the covered client against the Company, arising from all covered services provided by the Company and regardless of the number of accounts of which the client is a beneficiary, the currency and place of provision of these services. Currently, the maximum amount of cover is either the 90% of the cumulative covered claims of the covered investor, or the amount of €20.000, whichever is lower.

What are the costs?

Before you begin to trade Contract for Difference you should familiarize yourself with all commissions, fees, and other charges for which you will be liable. These charges will reduce any net profit or increase your losses. For more information, please visit our website (section Documents and Announcements – Legal Documents – Contract Specifications and Cost and Charges).

Possible costs associated with Contracts for Difference

One-off costs
Spread
The difference between the bid (sell) price and the offer (buy) price. Spread is dependent on many different factors, including but not limited to, the underlying liquidity and volatility and time of day.
Commission
The fee charged for the service of carrying out the transaction, subject to a minimum fee on small notional trade sizes.

Ongoing costs
Rollover
Rollover can be required on a monthly, quarterly, or yearly basis depending on the nature of the future product. During the rollover process the company will close the old future product (expiring) and will transfer the trade to the new future product. During the process the client will get charged the spread cost.

How long should I hold the product and can I take money out early?

The product has no recommended holding period. Provided that Conotoxia and the underlying market is open for trading you can enter and exit your positions at any time during market hours which can be found on our website. Such a decision does not entail any extraordinary costs, other than the standard costs of closing the position. Your position will expire only when you decide to close it or in the event, you do not have the available margin to hold your opened position. You are responsible for monitoring the product at all times in order to determine whether it is an appropriate time to open or close your position. However, please bear in mind that we may close your position without the prior consent in case you do not maintain a sufficient margin, or your position may be closed automatically due to the set of stop loss or take profit.

How can I complain?

Complaints about the products and services offered by Conotoxia may be submitted in writing (by post) or in electronic form (by e-mail). If you are not satisfied with the Company's final decision then you can submit a complaint to the Financial Ombudsman at http://www.financialombudsman.gov.cy and for clients with Polish residency at www.rf.gov.pl

Detailed information on the rules of submission, acknowledgment and processing of complaints can be found in the Client Complaint Procedure available on Company's website.
