

Standard Order Execution Time
for II quarter 2021

Standard order execution time – is the standard time period of an order to pass through the execution process and filled or completed. To find the execution speed we need to calculate the Hold Time period. It measures the element of execution latency, which is the time observed by the trader between placing an order and receiving notification of the fill or rejection.

Table 1. Standard order execution times in Q2 2021 for transactions took place on cTrader.

Instrument Category	Order Execution Time (Average)	Standard Order Execution Time*
	50% of orders executed in less than:	99% of orders executed in less than:
Forex CFDs	8.43 ms	235 ms
CFDs on Stock Indices and Commodities	7.61 ms	6486 ms
CFDs on Cryptocurrencies	6.72 ms	634 ms

Table 2. Standard order execution times in Q2 2021 for transactions took place on MT4.

Instrument Category	Order Execution Time (Average)	Standard Order Execution Time*
	50% of orders executed in less than:	99% of orders executed in less than:
Forex CFDs	48.15 ms	348 ms
CFDs on Stock Indices and Commodities	44.89 ms	376 ms

* In the event of abnormal market conditions, the Client's order may be executed in a longer time than the standard one. Situations in which the market conditions deviate from the standard ones are listed in the Best Execution Policy.
